Azure Health Check

Powered by Surveil

The Azure Health Check is the first step towards better understanding and optimising an organisation's Azure resource usage, wastage, and security.

Key Information

Free 21-day Azure Health Check, using read-only access.

Highlight significant Azure cost and resource savings.

Includes forecasting, cost overviews, storage optimisation, and more.

Powered by Surveil's powerful analytical capabilities, the Azure Health Check provides a summarised snapshot of potential savings opportunities, across a number of technical categories.

The Health Check is free to run, requires read-only access, and is a secure means of uprooting hidden opportunities to right-size, optimise, and enhance Azure resource usage.

To maximise the value on offer, the Azure Health Check report contains both summary and deep-reaching insights – starting with a brief overview of findings and recommendations.

The report then dives below the surface to explore the cost, usage, wastage, and optimisation opportunities across highly relevant areas of Azure – including VM and storage optimisation, Kubernetes, hybrid benefits, and Azure tagging.

Customer Outcomes

Tap into cost saving opportunities – including potentially unused Microsoft benefits.

Empowered decision-making using insights into the usage, wastage, and potential of Azure resources.

Partner Outcomes

Demonstrate Surveil's analytical capabilities and the immediate value they offer.

Use findings as a springboard for continuous improvement and the introduction of related service offerings.

Free, low effort pre-sales activity, requiring read-only access.
